Thanks, Dan. We'll get back to you on the study.

Gary

Hi Gary,

Thanks for the paper. I read it, and Moretti. Huang suffers a bit from not having a control group, although it is reassuring that CFUs decreased during surgery. And Moretti wasn't randomized. But most importantly, neither was done in a laminar flow setting where the requirements are higher, and where Scott claims a problem.

We could relatively quickly to a nice laminar flow study during real operations and get the result published in a major anesthesia journal.

Regards, Dan.
